

Financial Inclusion
Helping the poor manage and grow their money

Innovations for Poverty Action (IPA) works to identify and rigorously evaluate innovative products and programs that enhance poor households' access to and usage of improved financial services.

Across developing and advanced economies alike, bywincome households needleffective and affoldable took to six as and bo now money, make and mocke payments, and manage risk. In recent years, access to financial services has increased thanks to the expansion of digital finance and the efforts of financial service provides and governments for mach the unbanded. As access grows, however, we must ensure that the tools available to the poor are effective inhelping them manage and grow their money.

PA partners with financial service providers, governments, and researches to design and test financial products and programs that help households better manage their finances. Withouer 130 completed and ongoing andownized evaluations in 25 countries. PAS Financial Inclusion Program seeks to identify effective solutions to promote healthy financial behavior and share results to inform the work of financial service providers and governments around the world. The Financial Inclusion Program (FIP) provides technical and financial support to rejournus evoluations and p fot projects mixted to financial service design digital financia, and financial capability. The Programs projects which range is scale from pilots to multi-country randomized evoluations, are implemented across developing and advanced economies and flows on immosticins that are informed by behavioral insights, are cost-effective, and present a promising business case for scale-up. FIP identifies new research projects and gramsing partnerships through open-calls for proposals and periodic motion making and training events, and disseminates recent results through confirences, web inars, and publications.

Financial Inclusion Program Brief

The Financial Inclusion Program (FIP) provides technical and financial support to rigourous evaluations and pilot projects related to financial service design, digital finance, and financial capability. The Program's projects, which range in scale from pilots to multi-country randomized evaluations, are implemented across developing and advanced economies and focus on innovations that are informed by behavioral insights, are cost-effective, and present a promising business case for scale-up.
