Webinar | The Digital Credit Debate: Impacts, Challenges, & Lessons for Consumer Protection

Digitizing financial services has enabled tremendous innovation in the provision of credit in low- and middle-income countries (LMICs), which some hail as a transformative development with potential to drive financial inclusion, reduce poverty, and spur economic growth. However, others associate digital credit with a proliferation of misconduct, consumer abuses, and over-indebtedness, which can have severe consequences for the most vulnerable consumers and amplify inequality. The <u>Mobile Instant Credit: Impacts, Challenges, and Lessons for Consumer Protection</u> report aims to bring evidence and data to bear on the debate, focusing on Mobile Instant Credit (MIC) and related products like airtime loans where there is now a critical mass of impact evidence.

In this webinar, hosted by Innovations for Poverty Action (IPA) and the <u>Center for Effective Global Action (CEGA)</u>, IPA's <u>Ria Zapanta</u> and CEGA's <u>Dan Cassara</u> will introduce the key insights from the deck, drawing mainly from <u>CEGA's Digital Credit Observatory (DCO)</u> and IPA's <u>Consumer Protection Research Initiative (CPRI)</u>. Both initiatives have supported extensive research on digital credit and approaches to better protect consumers and support their financial health. The webinar will conclude with a panel featuring <u>Professor Silvia Prina</u> of Northeastern University and <u>Ammar Khan</u> from Creditbook Financial Services in Pakistan to discuss the implications of the evidence on future research and products on digital credit. The webinar will be moderated by <u>Paul Adams</u>, the Director of the Consumer Protection Research Initiative and Financial Inclusion Program at IPA.
