NATIONAL BUREAU OF ECONOMIC RESEARCH
1050 Massachusetts Avenue
Cambridge, MA 02138
February 2018

This study was registered, along with a pre-analysis plan, in the American Economic Association Registry for randomized control trials under trial number AEARCTR-0001060. Institutional Review Board approval by Innovations for Poverty Action (#1185), NBER (#17, 116), and Yale University (#1410014779). For funding, we thank the Bill and Melinda Gates Foundation for funding related and overlapping data collection on access to savings, Celia and Joseph Gentry, NIH grant P01AG005842, and the Yale University Economic Growth Center. We thank Nate Barker, Leah Birdie, Rebecca Hughes, Marius Karabacork, Sana Khan, Megan McGuire, Neil Mirochnick, Isabel Olate, Nasreena Sampaco-Badiri, Cornelius Saunders, Martin Sweeney, and Sheha Stephen from Innovations for Poverty Action for research assistance and management support. We thank Peter Aronow and Gregory Cox for econometric consultation. We thank Lincoln Lau, David Sutherland, Peter Nüchke, Daniel Mayhugh, Zaldy Rodriguez, the ICM Metrics team, Danilo Mijares and the ICM Bacolod staff, Lilian Barinas and the ICM Dumaguete staff, Jonathan Sanchez and the ICM Koronadal staff, and Evren Managua and the ICM General Santos staff for their collaboration, patience, flexibility, and curiosity throughout the design and implementation of this study. All errors and opinions are our own. The views expressed herein are those of the authors and do not necessarily reflect the views of the National Bureau of Economic Research.

NBER working papers are circulated for discussion and comment purposes. They have not been peer-reviewed or been subject to the review by the NBER Board of Directors that accompanies official NBER publications.

Randomizing Religion: The Impact of Protestant Evangelism on Economic Outcomes

To test the causal impact of religiosity, we conducted a randomized evaluation of an evangelical Protestant Christian values and theology education program that consisted of 15 weekly half-hour sessions. We analyze outcomes for 6,276 ultra-poor Filipino households six months after the program ended. We find significant increases in religiosity and income, no significant changes in total labor supply, assets, consumption, food security, or life

satisfaction, and a significant decrease in perceived relative economic status. Exploratory analysis suggests the program may have improved hygienic practices and increased household discord, and that the income treatment effect may operate through increasing grit.
