## The Importance of Information Targeting for School Choice

By KERENDE F. AJAYI, WILLA H. FRIEDMAN, AND ADRIENNE M. LUCAN

While school choice programs are common, researchers and policymakers know little about the underlying decision-making processes and the unselfer of information across agent facearchers typically model the homesheld as a mitary decision maker, yet the preferences and information sets of gradows and their gasaliants and dffir widely & Knowing who utilized and homes and their gasaliants and the across first, poorly information schools and home gasaliants and their across and dffir widely & Knowing who utilized and Mbit 2012 in Kenys; Ajoyi 2015 in Chana). Third, its settings with optional school choice, how income or how -chacation households can be excluded entirely (Watters 2014). Discretly involving gasafiants in the choice rise dissemination strategies. The key bark into anderstanding the choice process and the role of indivantination strategies. The key bark into anderstanding the choice process and the role of sistentiation strategies. The key bark into anderstanding the choice process and the role of sistentiation strategies. The key bark into exclude and that most effective informa-tion dissemination strategies. The key bark into exclude and that most effective informa-tion show the information betwore the statements and the encour-cies and improve student outcomes. Privious statements and the most effective information are a near the provide the provident of information here a school and into a student in a stude of the provide the information with their partice of the provident of information here a school partice of provident of information here a school and the and the endown indention of information here a school and the information in the choice of the school of the provident provident of the provident of the provident in the information in the provident of the provident and the school of the provident of the school of the provident provident of the provident of the provident in the school of the provident of the provident of the provident in the school of the provident of the provident of the pr and the masker of information across agents, Researchen typically model the household is information set of underns and their gandland can differ widely.<sup>3</sup> Knowing who ultimately calcides and how the information available such agent affects the decision has crucial inpli-sion of more aprint affects the decision has crucial inpli-tion dissemination strategies. The key hourien to such schemes, and the more different information are a label of data and the calcident information are a lack of data and the endog-most allocation of information. In fills study we inder standards, and application indication financing in Chile's or other and the study while distributions and the lasticity information are a lack of data and the endog-most allocation of information. In fills study we include the harder particular indication financing in Chile's or other and harding and students targeted students agreed to the informa-tion dissemination intradication about choics. Our study experimentally indication financing in Chile's or other and analysis in the choics on the students and students targeted students and the endog-must allocations of information and the decision fight school choics. Our study experimentally students to applications in the their gandlants observe changes in behaviors and the decision share ve changes in behaviors and the decision student ty and there and the rest of started the provide of information and the decision of started the provide of information about choics on strates in the choics of states and the provident applications in the United Stares. States on survey and choics informations provision. We build on these studies by randomizing whether paradians were diacet recipions of informations interview paradians, the notable exception being market and and and and the endogenesis and students targeted students and the students and students targeted students and the students and students targeted students and the students of the provident the received on survey and choics in formations and the

44, 95 percent of guardian respondents were the more inclusive category of guardian to

Further, we are one of the few studies to direct inserview gandians, the notable exception bein Banerjoe et al. (2000). To test the effect of information access as targering, we created an information booklet as videos that we dediwered in scheed-based infor-mation sessions. We twisted the effects through 900-acheol madomized controlled trial in while we randomly assigned each jonice high sche-in the sample to one of three arms: information session for students, separate information se-sions for students and gasedians, and a contra group.

Boom, Based on data collected from a surv guardians, our intervention increased the lihood that guardians, reported helping having the final vote in, and being the only sion maker in the selection process. In add
