Abstract

India has had one of the most stringent lock-downs in response to the COVID-19 crisis. While the severity of the move will help in controlling the spread of the virus, it is bound to have severe economic repercussions over the long run. So, it is necessary to assess the impact of the coronavirus and measures taken to control its spread on citizens and businesses alike. This would help in informing the actions that need to be taken once the virus is contained and also for all future pandemics. The survey aims to quantify these assessments across different sections of society. The study from the survey will also develop insights into how trust in the state can alter the impact of government response to such crises.

Project Outcomes of Interest

To assess the public perception in India about the severity of the COVID-19 pandemic and their assessment of the government response to it; To evaluate the impact of the crisis on businesses across India in terms of the current lockdowns and the long-term implications of doing business across borders; To assess the future expectations that Indian citizens and businesses; To inform future actions of the Indian government; To determine the linkage between trust on the government and its impact on responses to such a health crisis

Impact Goals

- Build resilience and protect the financial health of families and individuals
- Build resilient and adaptable businesses and employment opportunities
- Improve social-safety net responses
- Promote peace and safety, and improve humanitarian response
