**Social Protection Amidst Social Upheaval:
Examining the Impact of a Multi-Faceted Program for Ultra-Poor Households in Yemen***

July 2020

Abstract

Social protection programs are needed more than ever during periods of social upheaval, but are also likely to be even harder to implement successfully. Furthermore, social upheaval makes measuring the impact of such policies all the more difficult. We study the impact of a multi-faceted social protection program, often referred to as a “graduation” model program, in Yemen during a period of civil unrest. We are unable to measure outcomes for four years, thus much remains unknown about what transpired in the intermediary time. After four years we find positive impacts on asset accumulation and savings behavior, albeit substantially less than the amount the household originally received.

We thank Nate Barker, Cotton Onwene, Sam Horn, Hakeem Kolomo, Lalchand Luhana, and Rachel Strohm for excellent research assistance and we thank in particular Matt Lowes for coordinating the fieldwork and project management in Yemen. We also thank the Social Fund for Development and the Social Welfare Fund for their partnership and in particular, Lams Al-Iyeni, Dawa Bahubaihi, Osama Al-Shami, and Anafat Al-Azili and Essam Al-Fadhil and Husam Al-Sharabi from Apex Consulting for their collaboration on data collection on implementation, as well as the Ford Foundation and the UK Department for International Development for funding support. All approval from the University #2006000972. All findings and opinions are our own.

Social Protection Amidst Social Upheaval: Examining the Impact of a Multi-Faceted Program for Ultra-Poor Households in Yemen

Social protection programs are needed more than ever during periods of social upheaval but are also likely to be even harder to implement successfully. Furthermore, social upheaval

makes measuring the impact of such policies all the more difficult. We study the impact of a multi-faceted social protection program, often referred to as a “graduation” model program, in Yemen during a period of civil unrest. We are unable to measure outcomes for four years, thus much remains unknown about what transpired in the intermediary time. After four years we find positive impacts on asset accumulation and savings behavior, albeit substantially less than the amount the household originally received.
