

The Importance of Management Support for Teacher-Led Targeted Instruction in Ghana

Ghana, like many countries in sub-Saharan Africa, has greatly expanded access to primary school in the last two decades, but very few children meet academic standards for their grade. A [recent evaluation](#) found that the Teacher Community Assistant Initiative (TCAI), a targeted instruction program in Ghana, improved children's basic skills in numeracy and literacy, but implementation was uneven and compliance with the program was low among classroom teachers. Researchers have partnered with Ghana Education Services (GES), The National Teaching Council (NTC), The National Council for Curriculum and Assessment (NaCCA), The National Inspectorate Board (NIB), and UNICEF to evaluate whether additional managerial support from head teachers and circuit supervisors can increase the likelihood that teachers implement targeted instruction in their classrooms. The results will help inform Ghana's Ministry of Education on how teacher-led targeted instruction can be replicated at scale in Ghana.

Policy Issue

Many developing countries have significantly improved access to primary school education, spurred by initiatives such as the United Nations Millennium Development Goals (MDGs), which called for achieving universal primary education by 2015. Enrolling more children has strained education systems—primary schools are failing to equip a large portion of students with even basic reading, writing, and math skills. The Sustainable Development Goals (SDGs), which build on the success of the MDGs, look beyond access to education quality. One SDG is to ensure that all girls and boys complete free, equitable and quality primary and secondary education leading to relevant and effective learning outcomes by 2030, measured both by rates of attendance, as well as by achievement levels in math and reading.¹

Targeted instruction is a pedagogical approach that tailors instruction at the level of the student's current knowledge instead of the level of the official curriculum. Evidence from Ghana found that targeted instruction had positive effects on learning even though take-up of the program was low among teachers. This study evaluates the effect of increased management engagement on program compliance and contributes evidence on scalable ways to implement targeted

instruction programs.

Evaluation Context

Ghana has high primary school enrollment rates, yet not all students are learning. According to a 2012 report from UNICEF's Global Initiative on Out-of-School Children, 89 percent of Ghanaian children were enrolled in primary school. However, only 8 percent met academic standards for their grade.² Based on data collected in 2016, fewer than half of 2nd grade pupils could read a single word in English or an official Ghanaian language of instruction. The gap also persists into higher grade levels. In grades four and six, a quarter of pupils were proficient in math, and only 37 percent in English.³

An [evaluation](#) of the Teacher Community Assistant Initiative (TCAI) targeted instruction intervention showed that teacher-led targeted instruction improved pupils' basic skills in numeracy and literacy despite teachers' low compliance with the program.

Details of the Intervention

An IPA research team partnered with GES, NTC, NaCCA, NIB, and UNICEF to evaluate if stronger management support can increase the compliance of teacher-led targeted instruction. The management support program is called Strengthening Teacher Accountability to Reach all Students, or STARS.

In Ghana, government schools in each district are grouped into circuits of 8-10 schools overseen by a circuit supervisor (CS). The circuit supervisor's acts as a liaison between the school and district education office. Over time, schools have come to see the CS as an enforcer not as a mentor or supporter. The STARS program seeks to change that relationship.

The STARS program aims to improve student achievement by enhancing head teachers' and circuit supervisors' roles in monitoring, providing feedback, motivating, and supporting teachers. The program will take place in 20 districts, comprised of 145 study circuits. Within those circuits, 210 government schools will be randomly assigned to one of three groups:

Training in targeted instruction: School teachers in grades four through six, head teachers, and circuit supervisors will be trained in how to provide instruction targeted at pupil's actual learning levels. For eight weeks of each 12-week term, the three teachers of upper primary will divide their students by learning levels, rather than grade level, for eight thirty-minute sessions per week, 40 percent of a pupil's English and math curriculum. The training is directly focused on the classroom teachers and head teachers; however, circuit supervisors often attend district level training. (70 schools)

Training in targeted instruction plus management training: Intervention one plus head teachers and circuit supervisors will receive additional training on how to best mentor and support teachers. Training participants will receive a resource manual that will outline how to perform specific tasks to support teachers and contain teacher observation forms and examples of successful mentoring strategies. (70 schools)

Comparison group: No program. Business will operate as usual in these schools. (70 schools)

The program will run for the entire 2018-2019 school year. An initial survey was conducted in June 2018. A follow-up survey will be conducted in July 2019. In addition, unannounced classroom observations will occur throughout the evaluation period to assess multiple dimensions of teacher effectiveness.

Results and Policy Lessons

Project ongoing; results forthcoming.
