# Climate disasters have large long-run effects on welfare and development

## An anticipatory, rather than reactive, approach to humanitarian aid

- How can we more effectively reduce the immediate impacts of these extreme weather shocks?

## An anticipatory, rather than reactive, approach to humanitarian aid

- How can we more effectively reduce the immediate impacts of these extreme weather shocks?
- Strong existing evidence that *regular* cash transfers help households cope with shocks (Adhvaryu et al. 2020; Asfaw et al. 2017; de Janvry et al. 2006; Jensen et al. 2017; Knippenberg & Hoddinott 2017)

## An anticipatory, rather than reactive, approach to humanitarian aid

- How can we more effectively reduce the immediate impacts of these extreme weather shocks?
- Strong existing evidence that *regular* cash transfers help households cope with shocks (Adhvaryu et al. 2020; Asfaw et al. 2017; de Janvry et al. 2006; Jensen et al. 2017; Knippenberg & Hoddinott 2017)
- Limited evidence exists about the timing of cash in response to shocks and the welfare impact of a one-off transfer (Doocy & Tappis 2017; Puri et al. 2017)

## An anticipatory, rather than reactive, approach to humanitarian aid

- How can we more effectively reduce the immediate impacts of these extreme weather shocks?
- Strong existing evidence that *regular* cash transfers help households cope with shocks (Adhvaryu et al. 2020; Asfaw et al. 2017; de Janvry et al. 2006; Jensen et al. 2017; Knippenberg & Hoddinott 2017)
- Limited evidence exists about the timing of cash in response to shocks and the welfare impact of a one-off transfer (Doocy & Tappis 2017; Puri et al. 2017)
- Anticipatory action: Forecasts/triggers + pre-arranged finance + pre-agreed action plan

## Why might timing of the cash transfer matter?

- Floods tend to be large and sudden, but predictable, with temporary effects on markets and long-lasting impacts on private assets.

## Why might timing of the cash transfer matter?

- Floods tend to be large and sudden, but predictable, with temporary effects on markets and long-lasting impacts on private assets.
- More timely transfers offer the opportunity to limit the welfare cost of shocks and manage the immediate aftermath (Aker 2011; Asfaw et al. 2017; Lawlor et al. 2019)

## Why might timing of the cash transfer matter?

- Floods tend to be large and sudden, but predictable, with temporary effects on markets and long-lasting impacts on private assets.
- More timely transfers offer the opportunity to limit the welfare cost of shocks and manage the immediate aftermath (Aker 2011; Asfaw et al. 2017; Lawlor et al. 2019)
  1. An earlier cash transfer *widens the choice set* of coping strategies.
  2. Extreme weather shocks can *disrupt markets* and access.

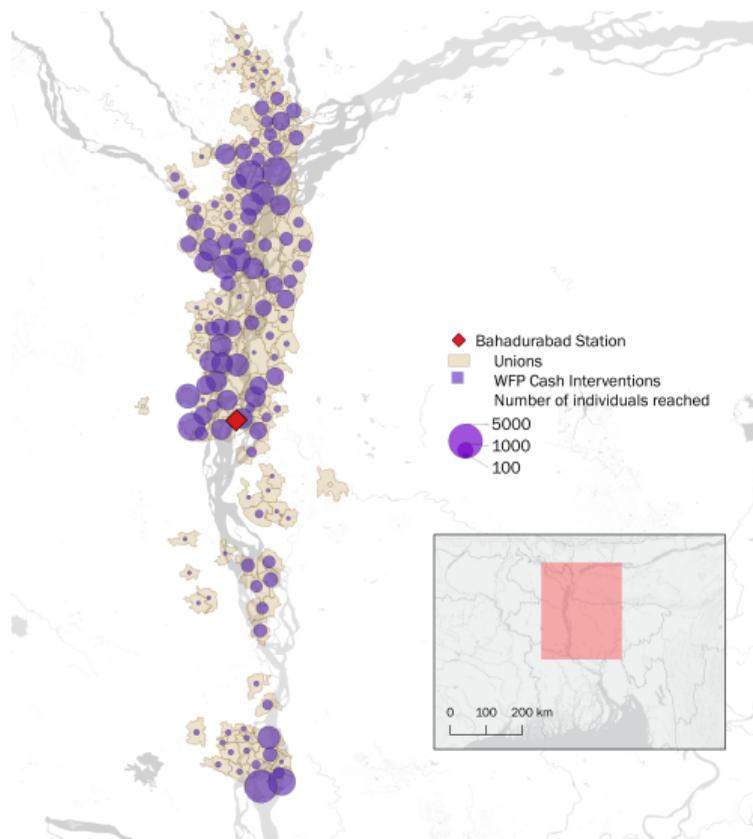

## Why might timing of the cash transfer matter?

- Floods tend to be large and sudden, but predictable, with temporary effects on markets and long-lasting impacts on private assets.
- More timely transfers offer the opportunity to limit the welfare cost of shocks and manage the immediate aftermath (Aker 2011; Asfaw et al. 2017; Lawlor et al. 2019)
  1. An earlier cash transfer *widens the choice set* of coping strategies.
  2. Extreme weather shocks can *disrupt markets* and access.
- There is a trade-off between maximising timeliness and targeting accuracy.

# Why might timing of the cash transfer matter?

- Floods tend to be large and sudden, but predictable, with temporary effects on markets and long-lasting impacts on private assets.
- More timely transfers offer the opportunity to limit the welfare cost of shocks and manage the immediate aftermath (Aker 2011; Asfaw et al. 2017; Lawlor et al. 2019)
  1. An earlier cash transfer *widens the choice set* of coping strategies.
  2. Extreme weather shocks can *disrupt markets* and access.
- There is a trade-off between maximising timeliness and targeting accuracy.
- This study: We quantify the impact of a one-off cash transfer delivered ahead of an extreme flood in Bangladesh.

**In 2020, Bangladesh experienced the second highest and protracted flood in the past two decades, with 5.5 million people affected**

WFP sent 4,500 Taka (\$53) using mobile money to 23,000 households in 131 unions along the Jamuna River in Bangladesh prior to and during the flood.

## A natural experiment to evaluate anticipatory cash transfers

- We exploit pre-existing lists used to target households where otherwise comparable households were excluded due to not having an active bKash account at the time of verification.

## A natural experiment to evaluate anticipatory cash transfers

- We exploit pre-existing lists used to target households where otherwise comparable households were excluded due to not having an active bKash account at the time of verification.
- We collect phone survey data from roughly 9,000 households approximately three months after the intervention.

## A natural experiment to evaluate anticipatory cash transfers

- We exploit pre-existing lists used to target households where otherwise comparable households were excluded due to not having an active bKash account at the time of verification.
- We collect phone survey data from roughly 9,000 households approximately three months after the intervention.
- We find:
  1. An anticipatory cash transfer has an impact on welfare three months later.

## A natural experiment to evaluate anticipatory cash transfers

- We exploit pre-existing lists used to target households where otherwise comparable households were excluded due to not having an active bKash account at the time of verification.
- We collect phone survey data from roughly 9,000 households approximately three months after the intervention.
- We find:
  1. An anticipatory cash transfer has an impact on welfare three months later.
  2. The cash transfer increases the set of pre-emptive actions taken by households.

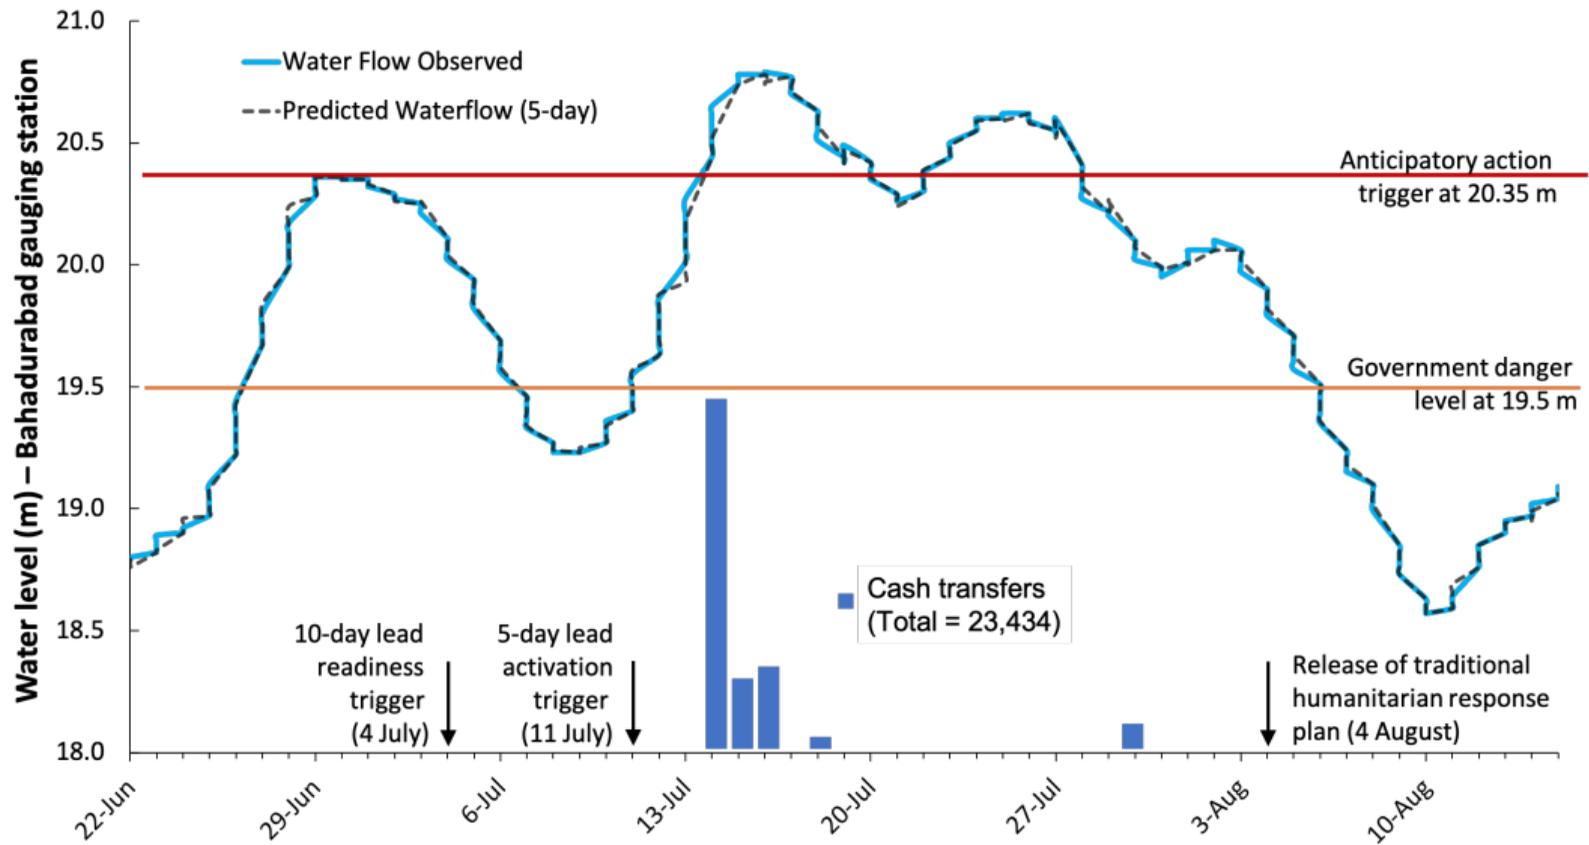

## A natural experiment to evaluate anticipatory cash transfers

- We exploit pre-existing lists used to target households where otherwise comparable households were excluded due to not having an active bKash account at the time of verification.
- We collect phone survey data from roughly 9,000 households approximately three months after the intervention.
- We find:
  1. An anticipatory cash transfer has an impact on welfare three months later.
  2. The cash transfer increases the set of pre-emptive actions taken by households.
  3. The speed of delivery matters: an earlier cash transfer is more effective.

## **2. Intervention and sample**

---

# Forecast-based triggers and five days of cash transfers

## Selection of vulnerable households for anticipatory cash transfers

- Data-driven forecasts triggered the release of anticipatory cash transfers worth approximately two weeks of food expenditure.

## Selection of vulnerable households for anticipatory cash transfers

- Data-driven forecasts triggered the release of anticipatory cash transfers worth approximately two weeks of food expenditure.
- **Step 1:** Unions selected.

## Selection of vulnerable households for anticipatory cash transfers

- Data-driven forecasts triggered the release of anticipatory cash transfers worth approximately two weeks of food expenditure.
- **Step 1:** Unions selected.
- **Step 2:** Households selected using pre-existing lists.

## Selection of vulnerable households for anticipatory cash transfers

- Data-driven forecasts triggered the release of anticipatory cash transfers worth approximately two weeks of food expenditure.
- **Step 1:** Unions selected.
- **Step 2:** Households selected using pre-existing lists.
- Only one mobile cash provider could be used and households had limited time to reactivate dormant accounts or set up new ones with that provider.

## Selection of vulnerable households for anticipatory cash transfers

- Data-driven forecasts triggered the release of anticipatory cash transfers worth approximately two weeks of food expenditure.
  - **Step 1:** Unions selected.
  - **Step 2:** Households selected using pre-existing lists.
  - Only one mobile cash provider could be used and households had limited time to reactivate dormant accounts or set up new ones with that provider.
- Otherwise comparable households were excluded
- Some variation in the day when households received cash within the same geographic unit

# Treated and control households use technology in similar ways

|  | Control mean | Treatment mean | p-value |

p-value from test of equivalent means with Union fixed effects

# Other data used in the analysis

## Second round of phone surveys

- Conducted for a separate evaluation
- 1291 households consistent with selection of treated and control households
- Provides supplementary “cross-section” 20 weeks after the intervention

# Other data used in the analysis

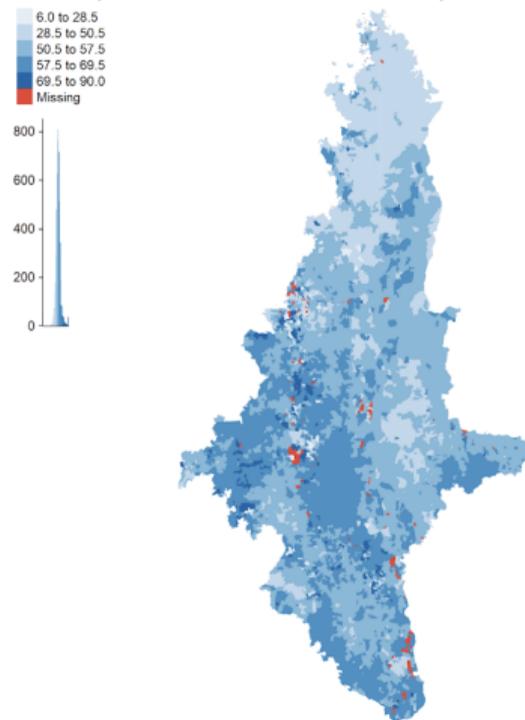

## Second round of phone surveys

- Conducted for a separate evaluation
- 1291 households consistent with selection of treated and control households
- Provides supplementary “cross-section” 20 weeks after the intervention

## Satellite flood data

- With technical assistance from the UN Centre for Humanitarian Data and MapAction
- Validated against external data sources
- Identifies the date of local peak flooding to complement timing analysis

*Variation in local flood peak date  
(days since 6 June, 2020)*

## 2. Results

---

1. To what extent does an early cash transfer help households?

$$Y_i = \beta_0 + \beta \cdot T_i + \gamma \cdot X_i + \delta + \varepsilon_i \quad (1)$$

1. To what extent does an early cash transfer help households?

$$Y_i = \beta_0 + \beta \cdot T_i + \gamma \cdot X_i + \delta + \varepsilon_i \quad (1)$$

2. Does the timing of the cash transfer matter?

$$Y_i = \beta_0 + \beta_1 \cdot T_i + \beta_2 \cdot T_i \cdot D_i + \gamma \cdot X_i + \delta + \varepsilon_i \quad (2)$$

1. To what extent does an early cash transfer help households?

$$Y_i = \beta_0 + \beta \cdot T_i + \gamma \cdot X_i + \delta + \varepsilon_i \quad (1)$$

2. Does the timing of the cash transfer matter?

$$Y_i = \beta_0 + \beta_1 \cdot T_i + \beta_2 \cdot T_i \cdot D_i + \gamma \cdot X_i + \delta + \varepsilon_i \quad (2)$$

| 0.65         | +7.8%            |         |
| 9.25         | +3.2%            |         |

# Results are robust to different model specifications

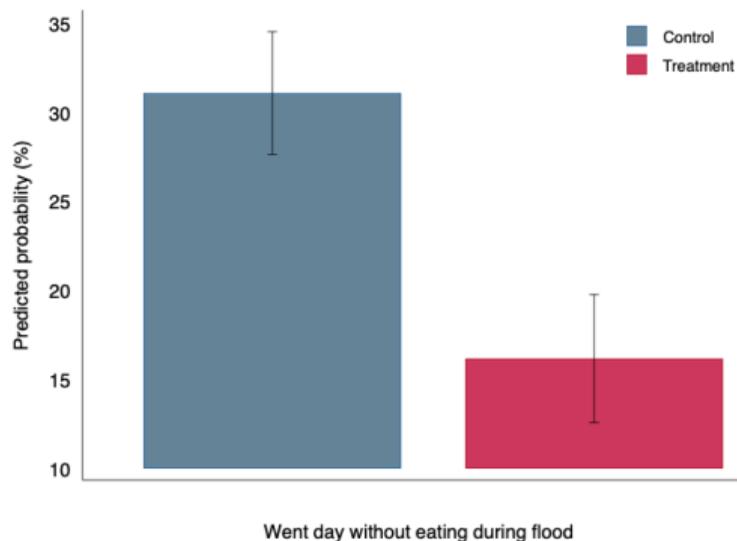

# Cash was mostly spent on food and reduced food insecurity

Most households used the cash transfer to buy food or water

Treated households were less likely to go a day without eating during the flood

# Cash was received at a critical juncture that increased the choice set available to households

## 2.2 Does the timing of the cash transfer matter?

## 2.2 Does the timing of the cash transfer matter?

### Does the speed of delivering anticipatory cash matter?

- We compare the date of cash transfers to the timing of the local flood peak using satellite data
- On average, households received cash 7 days before the local flood peak
- However, dangerous flood levels persisted for several weeks

*Timing of transfer relative to local flood peak*

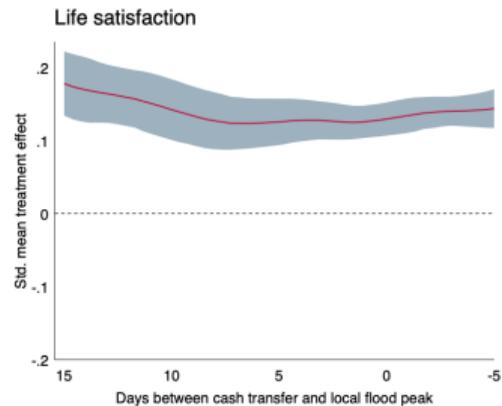

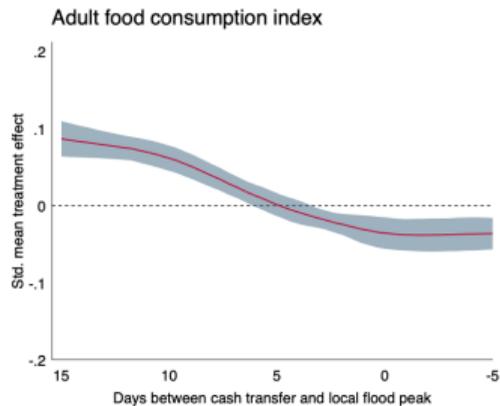

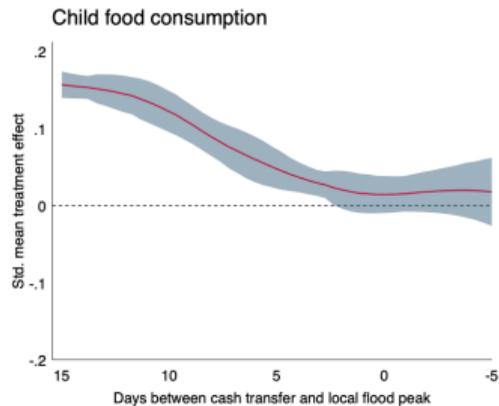

## How do small changes in timing matter?

✓ Results are robust to controlling for transfer date

# Timing matters, irrespective of functional form

# Welfare effects five months later

# Conclusion

- Using a natural experiment, we present evidence on the impact of a one-off humanitarian cash transfer in anticipation of an extreme flood.
- A small anticipatory cash transfer improves welfare, even three months later.
  - Children in treated households were 3 percentage points more likely to consume three meals or more a day
- An anticipatory cash transfer enabled households to take more action ahead of the flood.
- Speed of delivery matters.

## Open questions for further research

1. What is the value of an early cash transfer relative to a cash transfer received after the shock?

## Open questions for further research

1. What is the value of an early cash transfer relative to a cash transfer received after the shock?
2. What is the relative impact of information versus liquidity provided by the cash?

## Open questions for further research

1. What is the value of an early cash transfer relative to a cash transfer received after the shock?
2. What is the relative impact of information versus liquidity provided by the cash?
3. What is the relative impact of a multi-faceted approach relative to a cash transfer?

## Open questions for further research

1. What is the value of an early cash transfer relative to a cash transfer received after the shock?
2. What is the relative impact of information versus liquidity provided by the cash?
3. What is the relative impact of a multi-faceted approach relative to a cash transfer?
4. How large should the cash transfer be?

## Open questions for further research

1. What is the value of an early cash transfer relative to a cash transfer received after the shock?
2. What is the relative impact of information versus liquidity provided by the cash?
3. What is the relative impact of a multi-faceted approach relative to a cash transfer?
4. How large should the cash transfer be?
5. How can we target households more effectively in advance of extreme weather events?
